Emmanuel Koranteng Ankamah

Software & AI Engineer

Ghana emmanuelkorantenga@gmail.com linkedin.com/in/emmanuel-koranteng-ankamah-2ab032330 github.com/calm16

PROFESSIONAL SUMMARY

Software and AI engineer working across product engineering, backend systems and applied machine learning. Grounded in systems design, with particular attention to service boundaries, data models and the contracts between them. Production experience spans payment integration, multi-service architecture and applied machine learning under sparse data. Takes projects from requirements through architecture and implementation to deployment, and works comfortably with clients, stakeholders and cross-functional teams.

EDUCATION

Full Stack Development certificate 2025 – present

IBM

Frontend Developer professional certificate 2025 – present

Meta

BSc Computer Science 2021 – 2024

Kwame Nkrumah University of Science and Technology

WASSCE, General Science 2017 – 2020

Prempeh College

WORK HISTORY

AI/ML engineer — FarmaNet Jan 2026 – present

- Developed and evaluated machine-learning solutions for crop yield prediction using Random Forest regression, as part of FarmaNet's crop yield estimation system.
- Prepared, cleaned, validated and engineered agricultural datasets for training, and defined dataset schemas, feature requirements and historical training-data specifications.
- Assessed model performance against MAE, RMSE and R^2, and established evaluation procedures supporting iterative improvement.
- Contributed to the Spring Boot and Django integration for prediction services, covering API design, request validation and end-to-end workflow testing.
- Worked with the CTO and stakeholders on AI roadmap planning, training-data acquisition, deployment strategy and production readiness.

Commissioned software engineering Aug 2026 – present

- Built and shipped SwiftVote, a voting and ticketing platform for Ghanaian campus awards, live and processing real mobile-money payments across both web and USSD.
- Designed the transaction model so every vote is issued exactly once against a confirmed payment, with idempotent handling of unsigned provider callbacks and recovery when confirmations never arrive.
- Integrated mobile money, USSD shortcodes, SMS, transactional email and image delivery against third-party APIs.
- Delivered across the full lifecycle — requirements, architecture, implementation and deployment — for clients in events and commerce.

IT national service — Electricity Company of Ghana Nov 2024 – Sep 2025

- Diagnosed and repaired server room failures, restoring network functionality for hundreds of employees.
- Implemented preventive maintenance on servers, reducing critical outages and improving reliability.
- Deployed and configured systems, applications and security compliance tools, and managed remote access solutions.
- Coordinated support deployments across ECG branches, resolving technical issues affecting over fifty staff per visit.

IT trainee — Electricity Company of Ghana Sep 2023 – Nov 2023

- Installed and configured cabling, patch panels and network hardware across a site of more than fifty offices.
- Applied security measures and configured network settings to meet operational requirements.
- Documented troubleshooting methods alongside senior engineers.

SELECTED PROJECTS

SwiftVote 2026

A voting and ticketing platform for Ghanaian campus awards shows, taking mobile-money payments over both the web and USSD. React 19 · TypeScript · Node · Express 5 · PostgreSQL · Prisma · Railway

FarmaNet crop yield estimator 2026

An ML-powered crop yield estimator that predicts yields across Ghana’s agroecological zones and, crucially, tells users how much to trust each prediction. Python · Django REST · scikit-learn · pandas · Spring Boot · PostgreSQL

DrinkFresh 2027

The commercial site for a fresh yoghurt business — custom orders, delivery, wholesale purchasing, and a directory of the places you can buy it. Next.js 15 · TypeScript · Tailwind CSS · PostgreSQL · Prisma · Junipay

SKILLS

LANGUAGES	TypeScript, JavaScript, Java, Python, SQL, HTML, CSS, Bash
FRONTEND	React 19, Next.js 15, Vite, Tailwind CSS v4, React Router, JSP
BACKEND	Node, Express 5, Django, Django REST Framework, Spring Boot, REST API design, webhook handling and idempotency
DATA	PostgreSQL, Prisma, schema design
MACHINE LEARNING	scikit-learn, Random Forest regression, pandas, NumPy, data preprocessing, feature engineering, model evaluation (MAE, RMSE, R^2)
INFRASTRUCTURE & TOOLING	Railway, Vercel, Git, GitHub, CI from GitHub, PR-based workflow
NETWORKING & IT	Network architecture and configuration, IP routing, network security protocols, server administration, hardware installation, IoT connectivity, ICT service management

REFEREES

Available on request
